There are between fifty and sixty thousand blind people in the United States.

"Everybody ought to be rich" writes John J. Raskob in the late Ladies Home Journal. Well. this is one thing we Southerners will agree with John J. on.

Crime costs the United States \$33,000,000,000 annually, and 12,000 people are murdered each year. It is much easier for oriminale to evade justice than it is for them to be convicted Technicalities are the greatest hindrances to the punishment of crime. A good lawyer, plenty of money and plenty of nerve is all a oriminal needs.

Now that Royal Baking Powders has merged with Fleichmans Yeast we wonder if we are going to have to eat that stuff too.

Linbergh splashed mud all over a b nch of newspaper reporters and photographers in turning his pl .ne into a landing place at Bolling Field, In't it remark able how that fellow seems to know how to do the right thing on every occasion.

Marie Neely has been visi ing relatives in Bynalia.

Holds Memorial at

An all day meeting was held at Tabernacle Cemetery last Thurs day and the cemetery cleaned off and much work done. Six ladies under the direction of Mrs W M Cargill, who has had charge of this work for some time, carried dinner and employed 18 colored men and put in the entire day. The cemetery is over one hundred years old. Mrs Cargill appreciates the interest shown in this work and will be glad to have anyone interested in keeping the

cemetery in good shape, please see her.

NEWS REVIEW OF CURRENT EVENTS

Graf Zeppelin Arrives and Starts Eastward on a Trip Around World.

By EDWARD W. PICKARD G RAF ZEPPELIN, the great German dirigible, was the feature of the week's news. Its second crossing of the Atlantic, from Friedrichshafen to New York, was made without mishap, and after flying over the metropolis it came to the ground at Lake-hurst, N. J., in a perfect night landing. Nineteen fare-paying passengers, one stowaway and a miscellaneous cargo that included one chimpanzee, one gorilla and 600 canaries were brought over in comfort and safety.

Three days later the big airship, having been refueled, started back to Germany on what is planned to be the first leg of a trip around the world. The only stops are to be at Friedrichshafen, Tokio, Los Angeles, and again Lakehurst. If the Zeppelin keeps to her schedule she will arrive at the New Jersey hangar on August 29. Twenty-two passengers were taken on the eastbound trip. Those who intended to continue aboard for the globe circling journey included William B. Leeds, Lady Grace Drummond Hay, Carl Von Wiegand, Joaquin Rickard, Sir Hubert Wilkins, Lleut, Jack Richardson, Lieut. Commander C. E. Rosendahl and C. B. Burgess, the last three being sent by the United States Navy department. Dr. Hugo Eckener, as on the previous flight, is pilot of the dirigible, but it was reported that after this world tour he would relinquish Its command and devote himself to the management of the Zeppelin company, of which he is the business

Rear Admiral William A. Moffett,

settled were the adoption of the Young | Treasury officials announced that no plan for German reparations, the evacuation of the Rhineland, and the establishment of a committee of conciliation and control to supervise the demilitarized zone of Germany along the western frontier. Whether all or any of these things could be arranged amicably at this conference was a bit doubtful. This was especially true concerning the Young plan, which in certain of its features was distasteful to every one of the powers except pos-

sibly France and Italy. Philip Snowden, British chancellor of the exchequer, opened the discussion by frankly stating that the British government could not accept the Young scheme for division of reparations because it reduces England's share from 22 per cent to 18 per cent. He said: "Great Britain objects to the proposed division by which France gets five-sixths of the unconditional annulties-\$11,900,000 out of \$157,080, 000. Italy gets a considerable annual sum, amounting to \$10,000,000-much larger than under the Dawes plan. I hope for your forgiveness for my frank and firm speaking, but this division is utterly indefensible and the experts did not attempt to explain or

justify it." The smaller creditor powers, for which Premier Venizelos of Greece was the spokesman, also protested that their debts had been overlooked by the experts when they formulated the plan which "compresses" their reparations, but they said they had no intention of attacking the Young plan.

Representatives of France, Italy, Belgium and Japan defended the new plan as probably the best that could be devised, although each of them asserted his country was making sacrifices in accepting it. M. Cheron, French minister of finance, declared France accepted the plan in its entirety, without reservations, and considered it indivisible as the experts stated. Not withstanding these expressions on behalf of the other nations. Mr. Snowden and Arthur Henderson, British foreign secretary, told the reporters positively that Great Britain would reject the proposed new division of r. parations. Two commissions were named by the conference, one to study the political consequences of adoption of the Young plan and the other to deal with the financial questions involved. These bodies may not get through their work for five or six weeks. Dispatches from Rome said Italians generally were indignant at Snowden's speech, which they considered a churl ish attack on the Latin nations and calculated to endanger the friendship between Italy and England, Berlin also disliked it, feeling that Snowden was trying to "squeeze still more out of the unfortunate German tax payers," and fearing that France, rather than quarrel with England, would compromise at Germany's cost,

restrictions would be placed on the manufacture of cider and fruit juices in the home providing these beverages were not sold unlawfully, and Dr. James M. Doran, prohibition commissioner, warned the dry agents not to molest the makers unless there was clear violation of the Volstead act.

"HOLD your wheat as long as possible in order to avoid increasing the congestion of the terminal markets," is in substance the message to wheat growers issued by the federal farm board. The board's state ment said the crowding of the markets by unusually heavy shipments has caused a sharp depression of cash prices, although there is every prospect of a crop shortage in the world supply, which naturally would make prices higher in domestic and foreign markets.

O^{UR} federal prisons must be made bigger and better, especially because they are now so overcrowded with violators of the prohibition and narcotic laws, in the opinion of President Hoover. Consequently he has given his approval to a program of expansion of prison facilities that calls for the expenditure of \$5,000,000 and includes the building of a new prison in the northeastern states. The penitentlaries at Atlanta and Leavenworth will be considerably enlarged.

VICTOR L. BERGER, former con gressman from Wisconsin and for many years an international leader of the Socialist party, died in a Mil wankee bospital from injuries sus tained in a street car accident in July He was a determined fighter for the cause of socialism and though he got into trouble during the war because of his denunciations of capitalism, he was respected by his political enemies. He was elected to congress first in 1910. being the first Socialist to hold a seat In that body. Two famous inventors were claimed by death. They were Emile Berliner, who devised the disk phonograph and many other things. and Dr. Karl von Welsbach of Austria best known for his invention of the incandescent gas mantle that bears his name and his development of metal filaments in electric lamos Thorsten B. MOTHER RABBIT FIGHTS SIX MEN FOR HER BABY

Yellowstone Traveler Tells of Cottontail's Gallant Grit.

Yellowstone Park, Wyo .- Yellowstone National park offers the season's best rabbit yarn-incredible, yet solemnly attested to by six good men and true.

Park Ranger Fred T. Johnston tells it: "It was late in June. Six of us

were traveling in and on top of a truckload of beds and supplies over a road evidently seldom used.

"During our journey we overtook a very young jack rabbit-in fact, one so young that it barely had its eyes open. He was exerting every effort, however, to scramble out of the rut he was in, but seeing that he was bound to fail we stopped to assist him. "Our intentions were undoubtedly misunderstood, because as soon as he

was picked up he squealed as only a scared rabbit can squeal, but he accomplished his purpose. It's hard to believe that a rabbit would attack six men, but by the word of the six who were attacked that's just what happened.

Leaps at Bunny's Captor.

"The young rabbit 'knew his squealing' and so did his mother, or at least we gave the rabbit that came galloping out of the brush the credit of being his mother. And galloping is the word to express her progress in our direction on the second squeal from her complaining offspring.

"She appeared from a distance of a hundred vards or so away and was standing in the center of a circular

group we had formed before any of us could realize the truth of what we saw. I was truly thankful that I was not the one who was holding the infant rabbit. There she stood among the aforesaid six of us, eyeing every one with bulging eyes that meant only one thing--rage. She was poised on her hindlegs at the very feet of her infant's captor, apparently

Pathos in Passing of **Old-Time Family Album**

The London Sunday Times notes the wane of ancestor worship (western type):

"Ancestor worship is, apparently, on the wane. A French writer has pointed out that the custom of keeping a family album is no longer popular, and draws from the fact a moral concern-

ing the decay in pride of race. There is, indeed, a certain pathos in the decline of the album of family portraits. "There is pathos in it, and there is danger, too. How many a man, in years gone by, tottering on the verge

of dipsomania, has been saved by the recollection of this sisters and his cousins, whom he reckoned up in dozens? How many a man was rescued from the primrose path by the

contemplation of Aunt Susan, awful in her shoulder-of-mutton sleeves? Today, alas! it is unlikely that the forger's hand would be stayed, the burglar's jimmy arrested, by the solemn thought that Great-Uncle Robert would never have acted thus."

Too Humble

"We farmers are humble, but we're not as humble as some of these politicians seem to think."

George L Quackenbush, the million aire farmer of Virginia, was talking In Richmond about the farmer's hard luck and his demand for government ald.

"Yes, we're humble," he went on "but we're not like little Willie. "'Where are you going, Joe?' little Willie asked his friend.

"'Down to the drug store,' says Joe, to get an ice cream soda."

"Little Willie looked up at Joe wistfully, and said: 'Say, Joe, can I come and watch

re?' "

Topheavy

A visit to a farm is always a time replete with things of interest for children from the city. Animals are specially a source of wonder. The fact that ducks could swim on top of the water in the pond thrilled two little fellows.

It was all very well until one duck suddenly did a nose dive and disappeared.

"Oh, Buddy ; that duck lost his balance and fell in, and he'll drown if we don't get him out!" one of the two cried in distress.

Shorn

John has been attending Bible chool. Of course, one of the stories he learned was of Samson and Delllah. After mother brought him home from the barber shop the other after noon he was romping with other children on the lawn. Suddenly he "flopped" on the grass and gave every simulation of complete exhaustion. A little girl playmate anxiously inquired the cause of the trouble. The answer was, "I've jist come from the barber shop an' l lost my stren'th !"

Protect Silk Stockings

Many have found that washing stockings with 20 Mule Team Borax and a mild soap saves money on their annual bill for hosiery. Borax softens water, aids soap and keeps stockings fresh and sweet smelling.-Adv.

Short-Lived Politeness

EVER wait to see if a headache will "wear off." Why suffer when there's Bayer Aspirin? The millions of men and women who use it in increasing quantities every year prove that it does relieve such pain. The medical profession pronounces it without effect on the heart, so use it as often as it can spare you any pain. Every druggist always has genuine Bayer Aspirin for the prompt relief of a headache, colds, neuralgia, lumbago, etc. Familiarize yourself with the proven directions in every package.

Sensible Canadian

A heat wave that prevailed in Ontario, Canada, for several days induced a male citizen of Tillsonburg. after observing feminine styles, to appear on the street in short blue pants. bare legs and sandals, silk shirt with open neck and short sleeves and a straw hat. He first took the precaution to ask the chief of police if he would be arrested and was told that his costume was within the law.

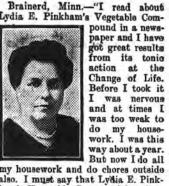

Read How This Medicine Helped This Woman

Brainerd, Minn.—"I read about Lydia E. Pinkham's Vegetable Compound in a news-

my housework and do chores outside also. I must say that Lydia E. Pink-ham's Vegetable Compound has done wonders for me and no woman should be without it. I sure can speak a good word for it."-MRS. JIM SMITH, R. R. 7, Brainerd, Minnesota.

nautics, while praising the successful trip of the Graf Zeppelin, calls attention to the fact that our navy is now building at Akron, Obio, two dirigibles that will be about twice the size of the German airship. Work on these vessels has been going on for some time and the admiral says the first of them will be put into use in 1931. Rach will be filled with six and onehalf million cubic feet of helium gas and will carry five airplanes attached to the bag. Admiral Moffett has been looking along the Pacific coast for a good place for a base for these immense dirigibles.

One novelty in aviation is to be noted this week. A company has been formed in Kansas City to rent "fly-ltyourself" airplanes to persons who cannot afford to own and maintain planes One hundred two-seater sport planes have been ordered and they will cost the renter between \$15 and \$20 an hour.

LIEUT. ALFORD J. WILLIAMS, America's lone hope in the international seaplane race for the Schnelder trophy, to be run at Cowes, England, September 6 and 7, has produced his plane, without government backing but with the aid of Admiral Moffett, and was testing it out near Philadelphia last week. He believes it will prove to be the fastest ship in the world and that it will beat the time made by Major De Bernardi of Italy last year-318 miles an hour. The engine, of 24 cylinders in banks of six, will deliver 1,100 horsepower. The plane is a twin float monoplane, the fuselage, wings and fixed tail surfaces of wood and the control surfaces of metal.

Lieut. Florentin Bonnet of the French army, selected by the ministry of air to pilot the French entry in the Schneider cup races, was killed when the airplane in which he was training for the speed test was wrecked in leaving the airfield at Bordeaux. Bonnet was the holder of the world speed record for land airplanes.

Autumn Colorings in Paris Apparel

Scarlet, Rich Brown, Rusty Yellow, Are Featured in Fall Clothes.

Clothes that were made for the summer, but visioning the autumn, are what the best dressmakers have been showing, writes a Paris fashion correspondent in the Louisville-Conrier-Journal. That designers are turning their thoughts to the warmth of autumn colorings is indicated everywhere. A steady stream of scarlet, rich brown, rusty yellow-tints of the first frost-nipped leaves of autumnruns through dress, with white forming the bridge with summer. But even the white dress has a touch of red, or perhaps a great splash of It somewhere.

At Berthe's street coats are in cherry red or other bright colors or in a rich, warm brown. These hang straight at the back with a slight flare at the sides, for to be truly smart all skirts, whether they be of dresses or coats, must dip to one side. Fashion might be said to be, on the slant; clothes are diagonally striped and many coats are cut on the bias.

As a trimming for cloth coats. printed or plain panne velvet takes the form of insertions or facings, the velvet matching the dress which completes the ensemble, rather than the coat.

Bands of fur half way up the sleeve are new and smart. Fur bracelets, they are called. Fashion is becoming very closely allied with anatomy these days, and elbows are now coming in for their share of attention.

At the moment beaver and badger are the most fashionable furs for trimming. Whether one's coat is collared with fur or not is pretty much a matter of personal choice, for flaring bias scarfs of silk or cloth are quite as smart as collars of fur. But if you decide to have your coat furtrimmed let the beavers and badgers do It.

Ragian armholes, full sleeves fastened with links at the cuffs, and very large outside hip pockets are newsy and important, as far as coats are concerned.

Features Three-Piece Ensembles. Three-piece ensembles are featured by Berthe, the jumper blouse being of crepe de chine to match the coat lining. All coats of the afternoon type are three-quarters or seven-eighths

length. The newest evening gowns at this house have ankle length side panels falling from beneath flat hip frills A separate and matching scarf is considered a necessary part of every evening dress.

Nicole Groult always has featured a normal waistline and is using it at present with good effect on jumper dresses with plaited skirts. The frock of light weight woolen, tailored in appearance and belted snugly with leather of harmonizing or contrasting color, is another popular dress.

A novelty is seen in a boutonniere of gay feathers worn on a tailored rever. Another method of adding col-

and trims them with many rows of stitching around the edges. Under these gay jackets, which are heavy enough to fill the requirements of a sweater, simple silk frocks are worn, usually in white, to avoid a clashing of colors, although a purple jacket might be worn effectively with a tennis dress of palest pink.

Lanvin, who never has allowed us to forget the charm and the perennial possibilities of the period gown-Lanvin, the fairy godmother of the picture dress-now has turned her capabilities to tailoring, sponsoring for the time being at least the tailored cloth dress for street wear. She, too, fa vors brown in light weight woolens and shows her versatility in frocks that are a far cry from her fluffy wide-skirted creations of rustling taf-

SUMMER GOOD THINGS

For those who like the flavor of ginger, this will be a most enjoyable drink:

Ginger Sorbet. -Chop one-half pound of ginger fine, add it to two quarts of water and two cupfuls of sugar and boil fifteen

minutes. Cool and add more leed water to make ten cupfuls of liquid. Add the juice of four oranges, one cupful of lemon juice and serve with crushed ice. Fill the glasses half full and add the sorbet.

Special Punch .- I'ut into a chilled punch bowl one cupful of granulated sugar and the juice of six temons. Stir to dissolve the sugar, and add a little ice to stand until serving time. Then add three peeled lemons sliced very thin, one quart of cracked ice. and pour in one or two bottles of mineral water and the same amount of ginger ale. Stir and serve in glasses. Japanese Skillet Cake .- Melt one half cupful of butter in a hot iron skillet. Add one cupful of brown sugar, stir until melted. On this place one cupful each of pineapple and pecan meats. Take one cupful of cake flour, previ-

ously sifted, add one and one-half teaspoonfuls of baking powder, one tablespoonful of melted butter or other shortening, one teaspoonful of vanilla. the yolks of four eggs beaten well. one cupful of sugar and the egg whites beaten stiffly. Combine as usual, adding the egg whites at the last. Pour over the mixture in the skillet and bake in a moderate oven an hour. Loosen the cake from the sides of the skillet and serve upside down. Garnish with whipped cream. Tea Punch .- Pour two quarts of boiling water over a teaspoonful of tea. In the meantime have the juice and peelings of three lemons and one orange in a pitcher. When the tea has steeped five minutes, strain through a fine strainer into the pitch er. Add one cupful of sugar and cool At serving time put into glasses with plenty of ice.

Vienna Chocolate .- Mix three heaping tablespoonfuls of grated chocolate with cold water. Pour into a double boiler with four cupfuls of boiling milk. Add sugar to taste and let cook five minutes. Beat the whites of two eggs to a stiff froth and put into the chocolate pot, pour the hot chocolate over the eggs and add a teaspoonful of vanilla, stir constantly until well mixed. This may be served chilled as a cold drink for a hot day.

or is by silk stitching, which carries out the principal shades of the yarns used in the mixed tweeds.

Wash sllk shirt waists or figured wool jersey jumpers complete threepiece ensembles. Many of these are trimmed in unusual ways. The wool ferseys, for instance, are finished by contrasting crepe de chine scarfs, tied at the front, and silk cuffs to match. Jumpers of white or colored satin have fitted cuffs, ties, belts and appliques of darker colored or black satin. These touches of distinction tend to bring blouses very much to the foreground.

Every woman these days has cardigan jackets galore. There are so many of them in every color and kind of cloth that one needs must do something original to make a cardigan that will cause even a flutter of excitement.

Jeanne Lanvin, the clothler of youth, has done the unusual in making for the late summer and autumn bright colored cardigans of thick diagonally striped cloth in warm tones of emerald green, pansy purple and poppy red. These she makes unlined

that suntan, so much talked about as to have become bromidic to the point of boresomeness, has brought about this Indian style note.

Briefly tabulated, here is a resume of what various well-known dressmakers are presenting in modern jewelry:

loring at this house.

jewels were jewels.

Louiseboulanger shows, with frocks of mixed tweed or jersey, wooden necklaces and bracelets in the form of strands of tiny wooden beads twisted together. On the dresses she uses buckles of bright colored carved wood, as many as three, one above the other, appearing on one belt.

The popularity of these wooden buckles, many of them of fantastic design, is not confined to this house At Champcommunal's a most unusual buckle represents a chicken peeping through an oval ring. Suzanne Talbot advocates fastening belts with the assistance of a pirate holding a knife in his teeth, a most bloodthirsty idea for a belt buckle.

Glass Jewelry on List.

For more formal daytime wear glass jewelry is popular, that is, just ordinary glass, not real crystal. Very charming bracelets are shown in all colors to match the costumes with which they are worn. They are made after the manner of the old-fashioned jet bracelets strung on elastic.

Suzanne Talbot exploits rings cut from crystal with a bit of carved black enamel, where the stone ordinarily would be set. She also uses crystal chains as shoulder straps and crystal belts on dresses.

Patou favors necklaces of black fringe interspersed with strands of dull glass beads tipped with tiny black balls.

Chanel continues to feature her well-known crystal jewelry. Her most popular evening necklace consists of two rows of contrasting crystals, one red, the other blue. But just to show her versatility she has introduced a new and interesting note in sports jewelry. Rice, formerly considered as the chief ingredient of nursery puddings, is what she uses. Strands of it, in two colors, are twisted into a short necklace which buttons around the neck and is finished in front with a long tassel. Each strand of rice in the tassel is tipped with a tiny glass

21.

The seam of a cushion rips, a streak appears on the polished table or mirror, it takes but a few seconds to attend to some of these trifling things, but allow them to accumulate and weary hours must be taken to restore order.

If a grease spot appears on a gown when one is away from the cleaning fluid bottle, just dash on a liberal supply of talcum powder and lay away for a day and the spot will have disappeared.

A stitch in time is surely a great saver of time and energy. These allowed-to-accumulate soiled things become more soiled, require twice the effort to put them to rights again. Here is a conserve that may be made at any time of the year and is especially good. Those who spend winters in the South where jellies and jams from home are longed for will enjoy adding this to their note books. and make a few jars this winter to serve when hungry for a sweet of this kind.

Pineapple and Apricot Conserve .--Take one pound of apricots, dry ones. soak overnight, and in the morning put through the meat grinder. Use just enough water to cover and well soak them, then use it to add to the conserve. Add one can of shredded pineapple and four cupfuls of sugar. Cook until thick. Pour into glasses and seal with paraffin.

Tarte aux Oignons. - Silce thin four large onions. Put in a quart of cold water for a few minutes, add a teaspoonful of sugar and half a teaspoonful of salt and cook a few minutes. Drain and add to a saucepan in which has been melted one-quarter pound of butter and cook until lightly browned. Add three slices of bacon that have been cut in small pieces. and let cook. Let the mixture cool until just warm, then add three eggs lightly beaten with four tablespoon fuls of cream. Fill tart shells with the mixture and pour melted butter over them and bake until set.

A Sour Stomach

In the same time it takes a dose of soda to bring a little temporary relief of gas, and sour stomach, Phillips Milk of Magnesia has acidity completely checked, and the digestive organs all tranquilized. Once you have tried this form of relief you will cease to worry about your diet and experience a new freedom in eating.

This pleasant preparation is just as good for children, too. Use it whenever coated tongue or fetid breath signals need of a sweetener. Physicians will tell you that every spoonful of Phillips Milk of Magnesia neutralizes many times its volume in acid, Get the genuine, the name Phillips is important, Imitations do not act the same!

CHAPTER XII-Continued

-23 "I don't wonder," Weld declared, "and yet you had all sorts of friends and servants at hand, and local police, and passers-by. Now, up here, you may think you are perfectly secure because you hardly ever see a stranger, yet the woods may be full of them."

۳.

Grant tried to laugh; in reality his heart was thumping against his ribs painfully. He forced himself to appear interested.

"Then there might be outlaws and bad men watching us right now?" Weld's answer appalled him.

"There are," said Swithin Weld. "I meant to have asked you if you'd seen anyone who answered to the description given by the fire warden. This man was a big, wild-looking bird with a rifle. Philbrick, the fire warden, knows every one for miles around, but he'd never set eyes on him before. He thinks it's a bootlegger blazing a trail down from the Canadian border."

"More probably a tramp," Trent suggested. "They often prospect for winter quarters about now, when the uights get cold."

Weld shook his head. Grant could see that this explanation did not satisfy him. There was a constriction about Grant's throat which made speech difficult, He hardly recognized his own voice.

"What do you think?" he demanded. "I don't know what to say. The thing that puzzles me is what he wanted to prowl sround this place for at about two o'clock this morning."

"That's interesting," Trent cried. "How near was he?"

Weld turned to the quaking Grant. "You know that big tree outside your window, the one they call Washington's oak? He was sheltering behind that."

"Why didn't you put a bullet through him?" Grant cried with a passionate energy which he could see surprised his host. Fools! thought Grant, to speculate on a man his heart told him was Frank Sutton. His tumultuous emotions swept away all fear that his manner might be offensive. "Why didn't you shoot?"

"My dear Grant,' Weld said, lifting his eyebrows a little, "what sort of defense could I have made to a judge and jury if I admitted I took a pot shot at a man who might be innocent of any wrong-doing? I propose we stalk him tonight and find out all about him." "Fine," Trent agreed, his eyes

sparkling. "He doesn't stand a chance against the three of us."

"The three!" Grant echoed. Not for worlds would he venture into the gloom of that forest by night. He knew it would be his fate to find the stranger face to face. While the others were creeping along wrong trails Sutton would have him at his mercy. Grant's flesh quaked at the thought. "Don't you want to be in on the

fun?" Weld demanded. "I do not," Grant said irritably. "To begin with, you'll never catch him. and I don't want to go stumbling over roots and brambles in the dark lookcingle men

what It is that's turning you into an abject coward. Is life worth living under such conditions? Perhaps I've no right to say it, but peace of mind is worth more than a fortune or position."

Grant could not possibly realize what a confession would mean. Its effect would be to free Sutton and put himself in its stead. Assuredly a life of ease and luxury was worth fighting for. Tomorrow he would rush back to New York and take passage in the first steamer he could find to some other country. There at least, he would be safe.

"My dear Trent," he said, with an affectation of tolerant scorn in his voice. "You couldn't possibly understand. You are an idler and I am the head of a hig business. My worries are incredible. I'm just irritable and out of sorts. What good night's sleep." "For a moment there was a look on Trent's face which Grant thought expressed pleasure. But it passed quickly. Grant felt relieved that he was conquering his panic fears. There had been a moment when he nearly blurted the whole thing to the man facing him.

ror, he heard, with great clearness now, footsteps advancing along the corridor to his door. It was only now that he knew those other more vague sounds had not been man-made. The steps approaching had in them nothing of furtiveness or stealth. He snatched up a book and sought to compose his drawn features. He believed Trent was coming and he did not wish to show fear after his brave words.

He did not even glance up immediately from his book. He yawned elaborately and then raised his eyes. Frank Sutton stood at the foot of the bed.

The look that he bent upon his be trayer seemed to have so little anger in it that Grant was amazed. The storm of passionate vengeance which he had anticipated was wanting. There was a look, instead, of a stern and settled purpose which frightened Grant more than any other attliude could have done.

"My note said I would see you on the seventeenth," Sutton remarked. "It was an error and should have read the twenty-seventh."

"What do you want" Grant nerved himself to ask.

"First of all a talk. Get out of bed and sit here." He pointed to a chair at one side of the open fireplace. When Grant had dragged himself across the room Sutton, after lighting a cigarette, sank into the chair opposite.

"When 1 last saw you," he began. "I swore to kill you on sight. I thought then that nothing else would satisfy me. Three years of prison

made me see things in another light.

Your death would not satisfy me now

big as this."

"You needn't come if you feel that way," said Weld, "but it won't be as hard to get him as you think. We shall wait until everything is quiet and he comes out to gaze at your \. Indow-'

"My window!" Grant cried.

"You are the only person with a room at the southwest corner. I'll swear he was looking up at your room.'

"I'll put a bullet through his head if he looks up again," Grant suid savagely. His terrors were making him careless of any feelings but his own.

"I hope you won't." Weld said, a trifle stiffly. "Both for your own sake and that of my uncle. To have a man murdered for looking up at a window isn't a thing that would please him." "It wouldn't be murder, it would be self-defense," Grant answered sullenly. "I'm not going to be threatened and not put up a fight."

Trent looked at bim with a sudden Interest.

"Then you know who it is?" he demanded.

Grant was conscious that he had said too much. With a tremendous effort he pulled himself together.

"No more than you do," he returned. "It's this constant talk of crime that gets me 'nervous."

Trent turned to Weld and discussed methods of capture. It was plain to Grant that his conduct had disgusted them. He did not greatly care. He felt he needed the protection of citles and crowds. Tomorrow he would go. But first there was this damnable night to live through.

As a rule, after dinner Grant sat in the library before the open fire while the others played billiards. Tonight he would not remain alone. He followed them into the billiard room, but declined to play. His nerves were in no condition for that. That they igpurchases immunity from annoyance. wored him did not burt his feelings now. Downstairs, Trent sought out Swithin Weld.

"I gave him a chance to tell me but he shut up like a clam."

"I'm glad," Weld retorted, "that sort doesn't deserve any chance. I prefer this way of getting a confession.'

From the window to which he crept timorously, Payson Grant saw the two men set out on their quest. For a time be was alone in this big silent camp, at the mercy of any stronger than he. It was difficult to resist the temptation to extinguish his light. He hoped the two men would not wander too far afield. Almost he wished he had gone with them. Here, he was in a trap. In fact, the trap was bailed with Payson Grant.

The oriental drug of which a medical friend had warned him was close at hand. He guiped down one of the pellets eagerly. Anything would be better than this fear which had be-

"And living with all you proud

Fowl That Consumes Most Rations Is Best Layer.

Have the early hatched pullets started to lay on the range? This is the question that leading poultrymen in New Jersey are asking themselves, as the method of handling these birds has everything to do with their production record this fall.

The men know that the expected molt can sometimes be avoided if the weight of the pullets after they come into production is maintained by feeding plenty of scratch grain. Just before the pullets begin to lay or when they are laying about 10 per cent on range, they are removed to their permanent laying quarters. Here the poultryman endeavors to get them in prime condition and, once he does so, trys to maintain it.

Proper feeds and a good system of management have been found essential if maximum feed consumption is to be secured, To lay eggs, feed is needed and the bird which consumes the largest quantity of a wellbalanced ration, lays the most eggs.

Some poultrymen will be disappoint. ed in the early-hatched pullets unless the birds have been carefully managed during the growing period, asserts L. M. Black, poultry specialist, It takes from five to six months to grow a Leghorn pullet properly. Longer than this is required for heavier breeds. According to Mr. Black, birds starting to lay at a younger age are often small and undersized and their eggs are likewise small. "Give the birds time to develop, furnish them with the necessities for proper development," he says, "and then have pullet eggs which can be sold as extras,"

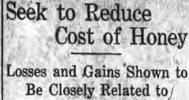

Deformed Baby Chicks Caused by Incubation

Spraddle legs and deformity among baby chicks are usually a result of the eggs having been kept too long before incubation. Eggs are at their best when only four days old and depreciate at a rate of approximately 5 per cent daily after they are one week old.

Another condition often responsible traces back to the health and vitality of the hens in the breeding flock. If there had been some disease in the flock or if all of the birds were not in the best of physical condition the consequent lack of vitality often results in an unusually large number of deformed chicks.

Muscle-Building Food of Greatest Importance

Many losses in raising chicks result from failure to furnish an adequate amount of the right kind of protein feed. If chicks are to make a profit for the poultryman, their growth must be rapid. This requires a large

(Prepared by the United States Department of Agriculture.)

Colony Yields.

Beekeeping practices and manage nent as well as the marketing of honey have been studied during the past year by the bureau of entomology and agricultural economics of the United States Department of Agriculture with a view to formulating methods that will help the beekeeper pro duce honey at a profit.

A preliminary report of the survey of apiary practices in the inter-mountain region-Utah, Colorado, Montana, Wyoming, and Idaho-covering the data secured in 1928 will soon be ready for distribution. A similar study will be started this year in the clover honey-producing region and both studles will be continued until sufficient data have been obtained to warrant advice being given or practices and management in beekeeping as well as regarding boney houses and equipment that have been found to be efficient and profitable.

Beekeepers Keep Records.

Beekeepers co-operating with the department in these surveys keep daily records of labor and expenses. make invoices, and report on the management practiced under a variety of conditions. This information will be of interest to all beekeepers who desire to compare their management practices with those of other beekeepers.

Forty apiarles were included in the 1928 survey, ranging in size from 150 o 1,800 colonies, and covering a total of more than 24,000 colonies.

The results of this survey, according to E. L. Sechrist of the bureau of entomology and R. E. Kifer of the bureau of agricultural economics, show that the great variance in labor and investment costs, as well as the yield per colony, have a marked influence on the beekeeper's profits.

Co-Operation Necessary.

ried out successfully without the active co-operation of the various state agricultural extension agencies, the bee press, beekeepers' organizations, and particularly the beekeepers themselves. All these have done excellent work in the past, and help given by

of great value, the bureaus say. The work undertaken in the clover region this fall will depend to a considerable degree on the assistance and co-operation of local beekeeping specialists and beekeeping organizations. Any organization able to assist in these surveys is invited to communicate with the division of bee culture Investigations, bureau of entomology, United States Department of Agricul ture, Washington.

Paradichlorobenzene Is

An effective method of controlling the plum tree borer that is also inexpensive has been developed by the zoology-entomology department of the South Dakota experiment station. The new remedy is simple and its

Titan Queen World's Largest Duroc-Jersey

THE COLLIERVILLE HERALD

Interesting Story of Growth of Colorado Sow.

How the world's largest sow, Titan Queen, registered Duroc-Jersey owned by the Colorado Agricultural college, was built up to her present phenomenal weight of 1,123 pounds In the past eight months is an interesting story as told by R. B. Broad, chief herdsman for the college, who has had personal charge of the task. The huge sow is also the largest Duroc-Jersey hog in the world.

Titan Queen was purchased at the International Live Stock exposition in Chicago last December by the Colorado school with the idea of building her to a record weight. She weighed 840 pounds at that time, the same weight she had registered at the hational swine show in 1927, when she was the largest Duroc sow shown.

Mr. Broad began feeding the big sow on a mixture of 60 per cent corn, 25 per cent oats, 71/2 per cent tankage, 5 per cent alfalfa meal and 21/2 per cent linseed meal. Broad believes that the alfalfa meal which helped to commete the balancing of the ration was largely responsible for re-starting Titan Queen's growth, after she was brought to Colorado from Illinois, where she was raised.

This ration was continued until March 4, when it was changed to all the whole corn she could eat, and all the skim milk she could drink. In addition she had access to a mixture of five pounds of tankage, two and one half pounds of alfalfa meal, and two and one half pounds of linseed meal in a self-feeder until April 17, when she weighed 1.025 pounds.

Broad says that no special treatment was given the sow. She measures 9 feet 4 inches from the tif of her nose to the tip of her tail; 88 inches in circumference around the heart; 84 inches around the flank; 46 inches in height, and 101/2 inches around the smallest part of her hind

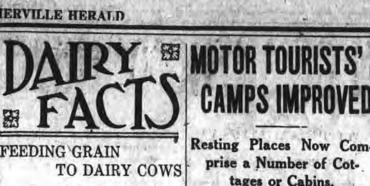

Combines Require Much

Skill and Attention Combines that have become so popular in the last few years require more skill and alert watching thar do the

old threshing machines, according to A. L. Young of the farm mechanics department, University of Illinois. "Unless the operator is entirely

familiar with the operation of the machine he should get the catalogue and directions and go over them carefully." says Mr. Young. The number of days of operation is an important factor in the cost of overhead operation. In order to make these as many as possible and to prevent the loss of any valuable time in the field it will be necessary to check over the entire machine so there will not be any delays and breakdowns in the harvest.

Cutting the grain too low should be guarded against as it will overload the machine and make repairs more necessary, Mr. Young warns. The operator should watch his machine for loose nuts and for places that show excessive wear. The machine should be oiled regularly rather than when there is nothing else to do.

Wise Feeder Will Supply Balanced Ration.

(By J. W. LINN, Extension Dairyman Kansas State Agricultural College.) Balanced rations are just as important to the dairy cow in summer as in winter. To maintain the balance and keep up the high production record, grain must be fed.

Grain feeding is always more expen sive than roughage or pasture feeding in Kansas. If grain feeding is more expensive than roughage or pastures, there can be only one reason for its use, and that is to supply nutriment that the heavy producing cow cannot get from the roughage or pas-

Profit from dairy cows is linked so closely with high production that it is impossible to separate them. In other words the cow producing 400 pounds of fat is making two and a half times as much profit as the one making 200 pounds of fat.

The wise feeder will feed a balanced ration and do so according to production. He will feed such as to have the same ratio between protein and carbohydrate-about one to six. The grain ration that will usually

be found most profitable is two parts of corn to one part of oats or bran. This will be true until the grass begins to dry up or grow short. It is important to again increase the protein part of the grain ration at which time the 4-2-1 ration which consists of four parts corn, two parts bran or ground oats, and one part cottonseed or linseed meal should be used.

The second important thing in profitable grain feeding is to use the grain according to production because the cow producing 50 pounds of milk will need about three times as much gralu as the cow producing 20 pounds.

Production Best Guide

for Feeding in Summer It's the high producing cow that

needs grain while she is on pasture, according to I. W. Rupel, of the animal busbandy staff at the Wisconsin State College of Agriculture. Some have the idea that their cows do not require grain because they turn up their noses at it when they first go out on pasture. These men will find, according to Rupel, that as soon as the cattle have been on the new grass about a week, grain will keep them

from slumping in production. The proper way to determine how much grain to give during the summer, Rupel believes, is to feed according to production. A Holstein, producing over 30 pounds of milk per day, should receive grain at the rate of one pound for every four pounds of milk produced above 30 pounds. That is, a cow producing 50 pounds of milk should have five pounds of grain. Jerseysand Guernseys should have a little more grain than Holsteins, and when

tages or Cabins. Like cars and highways, motor tour

ists' camps have been in the throes of evolution for a decade but seemingly are now taking a permanent form, according to the touring bureau of the Chicago Motor club. The camps now comprise a number of cottages, or cabins, with complete furnishings, and are known as "cabin

camps." "They are a far cry from the camps or ten, or even five, years ago," a bulletin issued by the motor club touring bureau stated. "Many cities and towns were prone to designate as a camp any place where water was available. The result was that those motorists who, favored camping were forced to carry a tent, cots, blankets, cooking utensils and even portable

fireplaces. Their cars, loaded with this duffel, resembled the covered wagons of the forty-niners. After driving perhaps 300 miles during the day, the motorists had to allot at least two hours to the strenuous effort of making camp.

"Today, however, the cabin camp is requently encountered west of the Mississippi river, and particularly in the western mountain states. Motorists driving in those regions can expect to stop at a cabin camp almost every night. Spotless linen and shining pots, pans and tableware await the travelers. A commissary is frequently nearby. Some cabin camps offer private garages and even a kennel for the dog. All of these accommodations, are usually obtainable at nominal prices.

"The East, in this instance, is slowly following the example set by the West. Cabin camps are making their appearance east of the Mississippi river, but slowly. 'If the law of supply and demand applies here, it may be expected that western car owners on tour in the East this summer will give great impetus to the creation of cabin camps in those states."

************************* MOTOR QUIZ

How Many Can You Answer?

Q .- What danger is connected with driving a car with a cracked window? Ans .- A minor accident, an unexpected bump, or even a strong wind may cause the glass to shatter, throwing chips into the car and possibly some one's eyes.

Q .- How many persons are en ployed in the automobile industry directly and indirectly? Ans .- About 3.956,000 directly and

385,000 indirectly. Q .- Why should the steering wheel be held by the rim instead of the spokes when driving at a fast rate of speed?

Ans .- Should a front tire blow, this method of holding the wheel gives more latitude in an emergency. Q .- What should be done if a fire

Automobile Racing Very **Popular Pastime in Italy**

According to a report issued by the Italy-America society, automobile rac-ing at break-neck speed is a major sport in Italy, rivaling even soccer in popularity. Thousands of fans see the races held in all parts of the country, particularly near Milan, where the "Monza classic," world-famous, is an annual treat. Recently the best machines and the fastest drivers in Italy took part in a thousand-mile race, which was won by Campari, Italian champion. Campari scored an average of 70 miles an hour, not on a race track, but on country roads-a real record when one considers the handlcaps and the obstacles in this type of racing.

The Monza classic is open to foreigners as well as to Italians, but the latter have been winning so consistently that foreign entries are becom-ing fewer and fewer each year. Campari has won the national championship twice and is easily the best road racer in the world. A few years ago he won the Grand Prix at Lyon, beating the most famous of his European competitors.

Italy is fast becoming a sporting nation. Besides auto and bike racing, soccer, basket ball and track, another rapidly-growing sport is boxing. A recent national championship drew 55,-000 fans. Italian boys make splendid fighters-as Americans well know. They have stamina, speed and courage. The Italian public, youthful, vigorous and enterprising, loves the element of contest. It is an inheritance from the days of old, when Romans packed the Coliseum and made naional heroes of their athletes. Surely_it is a good sign.

Automobile Is Equipped With New Safety Device

There is no more need for the driver of auto equipped with this safety gadget to put his arm out to signal his intention of truning or stopping. The driver of an English car has but to touch a button on the

Safety Device on English Cars.

stearing wheel and the arm worked by compressed air swings up and lights up immediately. A young English

amount of muscle-building material. estimated cost is not in excess of 3 Therefore, the ration should consist of cents per tree, according to Prof. an adequate supply of either milk or George I. Gilbertson, of the departmeat scraps.

Milk is regarded as the most efficlent form of protein that can be given to chicks. If it is available, it should be kept before the birds all the time. Semi-solid and dried buttermilk are good substitutes for liquid milk.

Poultry Hints

Feed table scraps and kitchen waste.

Also feed grain once or twice a day.

Purchase well-matured pullets rather than hens. . . .

Eggs should be marketed at least twice a week.

Watch growing pullets for intestinal parasites.

Oats are not at all sultable feed for geese or ducks. ...

Keep hens free from lice and the house free from mites. . . .

The oftener one can get the eggs to the market the better.

The requirements of Incubation for turkey eggs are the same as for the incubation of chicken eggs. . . .

Adopt a definite program of sanifation on your farm to reduce the loss of chicks. About half the losses of young chickens occur during the first

four weeks. . . .

A good market egg should be fresh, clean, have a good strong shell, and be a good size. Infertile eggs are better, as they keep longer at high temperatures than fertile eggs.

As soon as an egg becomes dirty it goes into the lowest fresh egg grade. To get clean eggs supply plenty of nests, at least one nest for every five hens. Construct your nests so the hens cannot roost on them. Keep plenty of litter on the floor. Clean the dropping boards daily or cover them with 2-inch mesh wire,

ment. Ordinary paraffin is melted and

paradichlorobenzine, or P, D. B., Is added at the rate of one part to nine parts of parafin. A thin coat of this solution-one pint to every four or five trees-is then brushed on the trunks and larger branches of the trees

When it hardens, the paraffin-P. D. B. combination forms a protective coat which does not chin off in summer temperature and which allows the dissolved P. D. B. to vaporize slowly and enter the tissue of the borer and kill It. The fumigating action continues

for several days until the larvae of the borer are dead. This method is believed to be the

first practical and effective control ever produced during two decades of research.

Prevent Horns Growing on Very Young Calves

To prevent horns from growing on young calves secure at a drug store stick of caustic potash. When the calf is two or three days old and as soon as the buttons where the born grows can be felt, clip the hair close to the skin just where the horn will grow.

Then wet the end of the stick of caustic potash and rub the button until It turns red but not until it bleeds. Do this with both horns and no horns will grow

Be careful not to use too much of the caustic potash. If any of it runs off it will burn the hide Also use paper In your hands so as not to burn your fingers.

Co-Operative Marketing of Different Products

Co-operative marketing of farm products is one way of increasing the armer's bargaining ability. Co-operative marketing has been getting on a sounder basis in recent years, and farmers will probably find it an important way of safeguarding their interests in the future. The tendency in . Il business is toward concentration of bargaining power. Co-operation is the farmer's most effective way of accomplishing this end.

Pastures Are Improved

by Eradicating Weeds Where more than one-fourth of the stand of vegetation in a pasture is comprised of weeds, it usually indicates that the land is either overgrazed, prematurely grazed or a combination of the two. In planning to improve the pasture, consideration should be given to correcting the causes responsible for the weedy growth. On smooth pastures, most weeds may be successfully eradicated by mowing. If such a method is used, the weeds should be cut about the time they are in flower-before any seed is matured.

Motor Brake Regulation in Canada Quite Strict

The department of highways of the Canadian government has issued regulations governing motor vehicle brakes. In class A, which includes all passenger cars and some trucks, foot brakes must stop the car within fifty feet at twenty miles an hour on a dry, level road. Under the same conditions, hand brakes must stop the car within seventy-five feet. Class B includes vehicles over 6,000 pounds gross weight, designed for transportation of goods, and all cars not in class A. Foot and hand brakes when applied simultaneously to this class of car must stop it within fifty feet or within seventy-five feet if applied separately.

The new device which blazes out the word, "Stolen," directly when a thief attempts to switch on the ignition of a parked motor car, in an attempt to steal it. The secret of the new device lies in a little box attached to the ignition system which it is necessary to unlock before the ignition is switched on. The invention is pronounced absolutely infallible.
